Subject index of Volume 96*

Boundary element methods

Fundamental solutions to Laplace's potential operator and to Navier's elasticity operator for Riemann surfaces with finite and infinite numbers of sheets, U. Heise (1) 33– 43
A weakly singular form of the hypersingular boundary integral equation applied to 3-D acoustic wave problems, Y.J. Liu and F.J. Rizzo (2) 271–287

Calculus of variations

On the control of partial differential equations: A C^K discretization method, M. Rouff (2) 173–187

Collocation method

The method of fundamental solutions for transmission and scattering of elastic waves, P.S. Kondapalli, D.J. Shippy and G. Fairweather (2) 255–269

Dynamics

A quasi-frontal subspace iteration method for finite element dynamic analysis and its application, G. Liu, D.-W. He and Y.-W. Shen (1) 109–115
Dynamics of flexible beams for multibody systems: A computational procedure, J.D. Downer, K.C. Park and J.C. Chiou (3) 373–408

Elasticity

The effect of different scalings in the modelling of nonlinearly elastic plates with rapidly varying thickness, L.J. Alvarez-Vazquez and P. Quintela-Estevez (1) 1– 24
Fundamental solutions to Laplace's potential operator and to Navier's elasticity operator for Riemann surfaces with finite and infinite numbers of sheets, U. Heise (1) 33– 43
A boundary-perturbation finite element method for plane elasticity problems, D. Givoli, I. Elishakoff and Y. Stavsky (1) 45– 63
The method of fundamental solutions for transmission and scattering of elastic waves, P.S. Kondapalli, D.J. Shippy and G. Fairweather (2) 255–269
A geometrically nonlinear model of the adhesive joint problem and its numerical treatment, U. Edlund and A. Klarbring (3) 329–350

* The issue number is given in front of the page numbers.

Finite difference methods

The influence of numerical parameters in the calculation of gas turbine combustor flows, J.J. McGuirk and J.M.L.M. Palma (1) 65– 92
Vectorization techniques for explicit arbitrary Lagrangian–Eulerian calculations, D.J. Benson (3) 303–328
Solitary waves interaction for the BBM equation, L. Iskandar and M.Sh.E.-D. Mohamedein (3) 361–372

Finite element and matrix methods

A boundary-perturbation finite element method for plane elasticity problems, D. Givoli, I. Elishakoff and Y. Stavsky (1) 45– 63
Advances in one-point quadrature shell elements, T. Belytschko, B.L. Wong and H.-Y. Chiang (1) 93–107
A quasi-frontal subspace iteration method for finite element dynamic analysis and its application, G. Liu, D.-W. He and Y.-W. Shen (1) 109–115
A relationship between stabilized finite element methods and the Galerkin method with bubble functions, F. Brezzi, M.-O. Bristeau, L.P. Franca, M. Mallet and G. Rogé (1) 117–129
On a stress resultant geometrically exact shell model. Part V. Nonlinear plasticity: formulation and integration algorithms, J.C. Simo and J.G. Kennedy (2) 133–171
Generalized variable finite element modeling and extremum theorems in stepwise holonomic elastoplasticity with internal variables, C. Comi, G. Maier and U. Perego (2) 213–237
The characteristic streamline diffusion method for convection-diffusion problems, P. Hansbo (2) 239–253
Vectorization techniques for explicit arbitrary Lagrangian–Eulerian calculations, D.J. Benson (3) 303–328
A geometrically nonlinear model of the adhesive joint problem and its numerical treatment, U. Edlund and A. Klarbring (3) 329–350
Dynamics of flexible beams for multibody systems: A computational procedure, J.D. Downer, K.C. Park and J.C. Chiou (3) 373–408
Discontinuity-capturing operators for elastodynamics, G.M. Hulbert (3) 409–426

Fluid mechanics

The influence of numerical parameters in the calculation of gas turbine combustor flows, J.J. McGuirk and J.M.L.M. Palma (1) 65– 92
A relationship between stabilized finite element methods and the Galerkin method with bubble functions, F. Brezzi, M.-O. Bristeau, L.P. Franca, M. Mallet and G. Rogé (1) 117–129
The characteristic streamline diffusion method for convection-diffusion problems, P. Hansbo (2) 239–253
Computer simulation of vortex flows around a body of revolution at high angles of attack and low speed, W. Zhang, S. Luo and P. Zhu (3) 351–360

Incompressible and near incompressible media

A relationship between stabilized finite element methods and the Galerkin method with bubble functions, F. Brezzi, M.-O. Bristeau, L.P. Franca, M. Mallet and G. Rogé (1) 117–129

Nonconservative loads

The (symmetric) Hessian for geometrically nonlinear models in solid mechanics: Intrinsic definition and geometric interpretation, J.C. Simo (2) 189–200

Nonlinear mechanics

The (symmetric) Hessian for geometrically nonlinear models in solid mechanics: Intrinsic definition and geometric interpretation, J.C. Simo (2) 189–200
Vectorization techniques for explicit arbitrary Lagrangian–Eulerian calculations, D.J. Benson (3) 303–328
A geometrically nonlinear model of the adhesive joint problem and its numerical treatment, U. Edlund and A. Klarbring (3) 329–350
Dynamics of flexible beams for multibody systems: A computational procedure, J.D. Downer, K.C. Park and J.C. Chiou (3) 373–408

Numerical solution procedures

A boundary-perturbation finite element method for plane elasticity problems, D. Givoli, I. Elishakoff and Y. Stavsky (1) 45– 63
The influence of numerical parameters in the calculation of gas turbine combustor flows, J.J. McGuirk and J.M.L.M. Palma (1) 65– 92
Advances in one-point quadrature shell elements, T. Belytschko, B.L. Wong and H.-Y. Chiang (1) 93–107
A quasi-frontal subspace iteration method for finite element dynamic analysis and its application, G. Liu, D.-W. He and Y.-W. Shen (1) 109–115
The relationship between the generalised mid-point and trapezoidal rules in incremental elasto-plasticity, L.J. Rencontre, S. Caddemi and J.B. Martin (2) 201–212
Vectorization techniques for explicit arbitrary Lagrangian–Eulerian calculations, D.J. Benson (3) 303–328
A geometrically nonlinear model of the adhesive joint problem and its numerical treatment, U. Edlund and A. Klarbring (3) 329–350
Computer simulation of vortex flows around a body of revolution at high angles of attack and low speed, W. Zhang, S. Luo and P. Zhu (3) 351–360
Solitary waves interaction for the BBM equation, L. Iskandar and M.Sh.E.-D. Mohamedein (3) 361–372
Discontinuity-capturing operators for elastodynamics, G.M. Hulbert (3) 409–426

Optimization and design of structures

A parallel iterative algorithm for structural optimization, W. Xicheng and M. Guixu (1) 25– 32

Plasticity

On a stress resultant geometrically exact shell model. Part V. Nonlinear plasticity: formulation and integration algorithms, J.C. Simo and J.G. Kennedy (2) 133–171

The relationship between the generalised mid-point and trapezoidal rules in incremental elasto-plasticity, L.J. Rencontre, S. Caddemi and J.B. Martin (2) 201–212

Generalized variable finite element modeling and extremum theorems in stepwise holonomic elastoplasticity with internal variables, C. Comi, G. Maier and U. Perego (2) 213–237

Shells and plates

The effect of different scalings in the modelling of nonlinearly elastic plates with rapidly varying thickness, L.J. Alvarez-Vazquez and P. Quintela-Estevez (1) 1– 24

Advances in one-point quadrature shell elements, T. Belytschko, B.L. Wong and H.-Y. Chiang (1) 93–107

On a stress resultant geometrically exact shell model. Part V. Nonlinear plasticity: formulation and integration algorithms, J.C. Simo and J.G. Kennedy (2) 133–171

The (symmetric) Hessian for geometrically nonlinear models in solid mechanics: Intrinsic definition and geometric interpretation, J.C. Simo (2) 189–200

Singularity methods

A weakly singular form of the hypersingular boundary integral equation applied to 3-D acoustic wave problems, Y.J. Liu and F.J. Rizzo (2) 271–287

Solution of integral equations (singularity method)

Fundamental solutions to Laplace's potential operator and to Navier's elasticity operator for Riemann surfaces with finite and infinite numbers of sheets, U. Heise (1) 33– 43

Solutions of ordinary and partial differential equations

On the control of partial differential equations: A C^K discretization method, M. Rouff (2) 173–187

Solitary waves interaction for the BBM equation, L. Iskandar and M.Sh.E.-D. Mohamedein (3) 361–372

Spline approximation

On the control of partial differential equations: A C^K discretization method, M. Rouff (2) 173–187

Structural mechanics

The effect of different scalings in the modelling of nonlinearly elastic plates with rapidly varying thickness, L.J. Alvarez-Vazquez and P. Quintela-Estevez (1) 1– 24
Generalized variable finite element modeling and extremum theorems in stepwise holonomic elastoplasticity with internal variables, C. Comi, G. Maier and U. Perego (2) 213–237
A geometrically nonlinear model of the adhesive joint problem and its numerical treatment, U. Edlund and A. Klarbring (3) 329–350

Thermal effects and thermodynamics

Temperature rise in elastic-plastic metal, A. Służalec (3) 293–302

Transport phenomena

The characteristic streamline diffusion method for convection-diffusion problems, P. Hansbo (2) 239–253

Turbulence

The influence of numerical parameters in the calculation of gas turbine combustor flows, J.J. McGuirk and J.M.L.M. Palma (1) 65– 92

Wave motion

The method of fundamental solutions for transmission and scattering of elastic waves, P.S. Kondapalli, D.J. Shippy and G. Fairweather (2) 255–269
Solitary waves interaction for the BBM equation, L. Iskandar and M.Sh.E.-D. Mohamedein (3) 361–372
